Art Unit: 1712

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 55-65, 79-85 and 86-94 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Shreve (4717643). The rejection is applied as in the previous Office Action. With respect to claims 55-65 and 79-85, the reference teaches mixing the alcohol (HPMA) with the acrylate copolymer under conditions in which it would inherently react with the acid anhydride produced as a side reaction when the isocyanate compound reacts with the acid groups of the acrylate copolymer. See the instant specification at page 45, line 10 through page 43, line 11. As Shreve removes the residual isocyanate, after addition of the alcohol, it is not seen how the claimed product differs from the product disclosed by the reference. With respect to claims 86-94, the acrylate copolymer is dissolved in methyl ethyl ketone (MEK) and HPMA is added and left to cool before removing the residual isocyanate. See examples. The difference in the boiling point of the coating solvent MEK and the alcohol HPMA is less than 75° C. As claims 86-90 no longer require reacting the polymer with isocyanate until the isocyanate is vanished from the system of reaction, these claims are now included in the rejection.

Claims 66-78 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
